

Type of procedure	Gastrectomy / gastric resection
Airway	Intubation
Anesthesia model	Sevoflurane / Remifentanil or Sevoflurane / Fentanyl
Epi / Spinal	Epi
Premedication	Paracetamol + Oxycodone
Comment	Double-lumen tube for thoracoabdominal surgery; consider RSI
Tips for the anesthesiologist	Major abdominal surgery with bleeding and fluid loss risk. Plan postoperative analgesia carefully.
Recommended vascular access	Peripheral IV x2 ($\geq 18G$) + arterial line. Central venous catheter recommended for long procedures.
