

Type of procedure	MIUS (with tubes in or out) – pediatric
Airway	Face mask anesthesia.
Anesthesia model	TIVA: Propofol / Alfentanil.
Premedication	Usually none.
Postoperative analgesia	Paracetamol.
Notes	Usually a very short pediatric procedure. Focus on gentle airway handling and rapid recovery. Avoid opioids if possible to facilitate quick awakening.
Recommended vascular access	Peripheral IV ×1–2 (20G).
