

Type of procedure	Minor spine surgery (endoscopic lumbar disc decompression)
Airway	Intubation
Anesthesia model	Sevoflurane / Remifentanil
Epi / Spinal	-
Premedication	Paracetamol + COX inhibitor + Betamethasone + Ondansetron
Comment	-
Tips for the anesthesiologist	Short procedure, low bleeding risk. Focus on postoperative analgesia.
Recommended vascular access	Peripheral IV x2 (18-20G). Arterial line if ASA ≥ 3 or bleeding risk.
