

Type of procedure	Neuromuscular scoliosis
Airway	Intubation
Anesthesia model	Sevoflurane / Fentanyl
Epi / Spinal	Epi (if indicated)
Premedication	Individualized
Comment	Consider ketamine infusion (if indicated)
Tips for the anesthesiologist	Focus on airway management and stable positioning.
Recommended vascular access	Peripheral IV $\times 2$ ($\geq 18G$) + arterial line. Consider central venous catheter for complex surgery or ASA 2-3.
