

Type of procedure	Sacrum amputation
Airway	Intubation
Anesthesia model	Sevoflurane / Fentanyl
Epi / Spinal	Epi
Premedication	Paracetamol + Oxycodone
Comment	-
Tips for the anesthesiologist	Focus on airway management and stable positioning.
Recommended vascular access	Peripheral IV x2 ( $\geq 18G$ ) + arterial line. Consider central venous catheter for complex surgery or ASA 2-3.
