

| | |
|-------------------------------|--|
| Type of procedure | Skull and facial injuries |
| Airway | Intubation. Nasal route if indicated. |
| Maintenance of anesthesia | Sevoflurane / Fentanyl |
| Premedication | If indicated: O / Ond / Bet / P |
| Postoperative analgesia | If indicated: Clonidine and oxycodone. |
| Comment | – |
| Tips for the anesthesiologist | Adapt anesthesia and monitoring according to procedural complexity. Assess bleeding risk and ensure adequate pain control. |
| Recommended vascular access | Peripheral IV ×2 (18–20G). Arterial line for major procedures or ASA ≥3. Central venous catheter if risk of instability. |
