

Type of procedure	Robotic surgery in morbid obesity (BMI ≥ 40)
Airway	Intubation
Anesthesia model	Desflurane / Remifentanyl
Epi / Spinal	—
Premedication	Paracetamol + COX inhibitor + Betamethasone + Ondansetron
Tips for the anesthesiologist	High airway pressure risk, positioning challenges and increased PONV risk.
Recommended vascular access	Peripheral IV $\times 1-2$ depending on extent. Adapt according to bleeding risk.
